

New Apprenticeship courses

JTL offer a range of Apprenticeships within the mechanical engineering sector including the new Level 3 Plumbing & Heating Standard.

JTL is updating the way we train heating and plumbing engineers to achieve the required industry Standard. The following Apprenticeships will not only streamline the learning route, but also provide Apprentices with a wealth of knowledge and experience to prepare them for a professional career:

- Plumbing & Domestic Heating (L3)
- Building Services Engineering (BSE) (L2 and L3)
- BSE Maintenance Engineer (L3)

To find out more about our courses and taking on an Apprentice call us on **0800 085 2308** or visit **www.jtltraining.com**

Plumbing & Domestic Heating Technician L3

This brand new qualification offers more choice than ever before by reintroducing gas heating training as an option. The depth of knowledge and experience gained throughout the 4-year course ensures that employers will benefit from highly trained employees who will deliver quality craftsmanship resulting in an improved customer experience.

Plumbing & Heating QCF Basic Craft L2 or Advanced Craft L3

These qualifications will still be offered until July 2020, they enable Apprentices to learn skills to equip them with the knowledge and experience needed to become a competent plumbing and heating professional.

Building Services Engineering (BSE) L2 and L3

The new BSE qualification has been introduced to replace the Heating & Ventilation Apprenticeship. The course covers two distinct job roles, Installers and Craftspersons. The new qualification ensures that this specialist branch of engineering within the construction sector produces competent and skilled individuals.

Building Services Engineering (BSE) and Maintenance Engineer L3

Service and maintenance engineers play a key role in planning and completing a range of maintenance work, encompassing industrial and commercial building services, engineering systems such as ventilating, heating, water supply, waste (effluent discharge) and drainage. The new L3 qualification has been developed to ensure Apprentices receive the range of experience, knowledge and expertise needed to carry out competent work.
